Transor Expands Production Staff

Elk Grove Village, IL... Since moving to new facilities in 2014, Transor Filter has experienced rapid sales growth both domestically and internationally. With even more significant growth projected for 2019, Transor announces new hires and promotions.

The company has expanded the assembly staff and promoted Robert Coombs and Dan Esposito to the positions of Assembly Manager and Supervisor respectively. Luke Harvey has also assumed the position of Logistics and Purchasing Manager. “These moves will enable us to satisfy the growing demand for Transor Filters around the world,” stated Transor President, Irv Kaage.

Internationally, Transor Japan has expanded their offices in Tokyo. “The many benefits of One Micron Filtration are being recognized by both the tool making and EDM sectors in Japan,” continued Kaage. “This expansion shows our commitment to that market.”
